

Amendment to the Claims:

The listing of claims will replace all prior versions, and listings, of claims in the application:

1. (currently amended) An operating device for a vehicle which includes at least one slider joined to a window which slides along a rail which defines a window trajectory, the window trajectory being determined by an angle of departure formed by ~~[[a]]~~ the vertical line and the initial upper curvature of the rail and by a curvature radius of the window trajectory; and a means of adjusting the position of the device with regard to a door of the vehicle, wherein the angle of departure angle is between + 45° and - 45° and the curvature radius is ~~in the interval between 0mm to~~ more than 500 mm.
2. (previously presented) An operating device in accordance with claim 1, wherein the rail has a trajectory including several curves with corresponding changes in curvature without points of inflection.
3. (previously presented) An operating device in accordance with claim 1, wherein the means of adjusting the position of the device include an upper pivoting axle on the rail which allows the device to tilt slightly to fit into the door, using at least two lower transversal screws for lateral adjustment, and at least one screw on the slider which allows the position of the window to be adjusted with regard to the rail and the slider.
